

## DX CODE STICKERS

### *Instructions*

1. Peel apart sticker from backing paper.
2. Carefully place DX sticker over existing DX code on the film cassette. Ensure that the two

arrows on the sticker are pointing in the direction of film leader emerging from the cassette with the emulsion (matte) side facing up. Use the film mouth flange as a guide to align the sticker.

3. Press sticker firmly on cassette ensuring that it is straight and flat.

Please note: In the event of any unexpected or premature film rewinds, the top (solid red) portion of the sticker should be trimmed off to reveal the top row of the cassette's original DX code.
